

TIIDE planter

Tiide is the little 'rascal' in the Extery urban furniture collection, created to bring fresh and new opportunities to the arsenal of a city planner or a landscape architect. With Tiide everything is different: round shapes and soft bends as well as lustful proportions. A little flirt with Bauhaus and the design techniques of contemporary furniture design that rarely make it to the more conservative urban furniture domain will surely catch your eye. Tiide is playful and friendly on the outside, but robust on the inside.
